

The slide features the Cisco logo at the top left and a yellow hexagonal icon at the top right. A large globe is positioned on the right side. The main title "Cisco Wireless Mesh Networking" is centered in a dark blue box. Below the title, the speaker's name "Wolfram Maag" and email "wmaag@cisco.com" are listed. At the bottom left, there is small text: "Presentation_ID", "© 2006 Cisco Systems, Inc. All rights reserved.", and "Cisco Confidential".

The slide has a blue header bar. The word "Agenda" is centered in a large blue font. Below it is a bulleted list of topics. At the bottom left, there is small text: "Presentation_ID", "© 2006 Cisco Systems, Inc. All rights reserved.", and "Cisco Confidential". At the bottom right, the number "2" is visible.

Agenda

- Wireless Mesh Übersicht
- Outdoor Wireless LAN Produkte
- Outdoor Mesh
- Deployments / Beispiel
- Zusammenfassung

Wireless Mesh Übersicht

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

3

Wireless Mesh Networking Definition

- Die Verbreitung von Wi-Fi Clients treibt auch eine verstärkte Nutzung durch 802.11-based Applikationen durch Kunden
- Unlizenzierte Bänder verfügbar und Cisco Wireless Routing erlaubt "pico-cells" um Verbindungen zwischen AP's mit niedrigen Infrastrukturkosten zu realisieren
- Cisco bietet integrated Security, roaming Mobility und einheitliches Management des integrated Wired + Wireless Netzwerks

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

4

Mesh Netzwerk Märkte

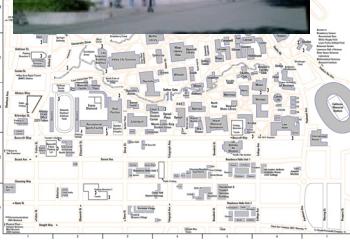

Enterprise Mesh <i>Moving Indoor Wi-Fi Outside</i>	Stadt Mesh <i>Staat, Landkreise & Städte</i>	Service Provider <i>Managed Wi-Fi Services</i>
<ul style="list-style-type: none"> • Universitäten & Healthcare Erweitert Wi-Fi Coverage auf dem gesamten Gelände • Hospitality Indoor/Outdoor Mesh eröffnet neue Hospitality Märkte • Manufacturing – Versand und Wareneingang Inventory Applikationen, hand-held scanner, RFID, etc. • Wireless Bridging P2P/P2MP Links zwischen Gebäuden 	<ul style="list-style-type: none"> • Public Safety Polizei, Feuer, BW, THW Wireless Infrastruktur, Vehicles & Clients • Wireless Access für Fixed Applikationen Video Überwachung, Sensoren • Public Service Hot Spot Access für Städte, überwachung und Maintenance für Public Infrastruktur • Economic Development Wi-Fi Broadband Access in nonbroadband Gemeinden 	<ul style="list-style-type: none"> • “Hot Zones” Erweiterung von “Hot spots” auf “Hot Zones” • Wireless ISPs Last-mile Access Providers mit Wi-Fi als Broadband Service • Cable Operators Erweiterung des Netzwerks über die Kabel Infrastruktur hinaus

5

Indoor/Outdoor Wireless Solutions for Education Customers

- User: Studenten, Administration, Facilities
- Applikationen: Student/Admin Access, Video Überwachung, Facilities Mgmt
- Value Proposition: Hot-Spots, Service, Sicherheit, Zugriff auf Applikationen

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

6

Outdoor Wireless Produkte von Cisco

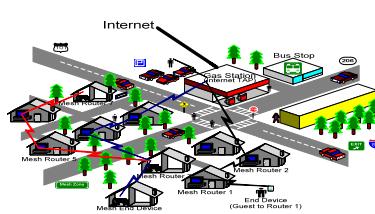

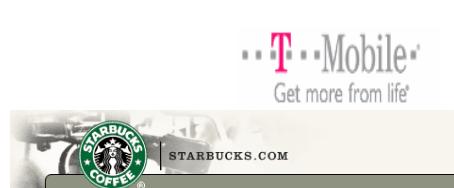

- Cisco hat eine umfassendes Portfolio für Outdoor Wireless Connectivity
 - AP1510 Mesh
 - 3270 Mobile Access Router
 - AP1242 IOS/LWAPP
 - BR1310 2.4GHz Bridging

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

7

Hot-Spots werden zu Hot-Zones mit Wi-Fi Access

- User: Consumer / SMB
- Applikation: Effizienter Zugriff für schlecht verkabelte Infrastrukturen, Wireless ISPs für Broadband Access
- Value Proposition: Fee-based Service für ISP, Extra Fee Services für städtische Betriebe

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

8

Outdoor Wireless LAN Produkte

Presentation_ID

9

Cisco 3200 Mobile Access Router

- Gründe für einen Router
 - Autonomes Device für Applikationen, die lokale Kontrolle brauchen
 - Viele Hardware Konfigurationen
 - Viele zugelassene Antennen

- Mehrere Modes möglich
 - Work Group Bridge (WGB)
 - Access Point (AP)
 - Bridge (Root or Non-Root Bridge)
- Multi-WMIC
 - 802.11b/g functionality
- Interface Cards für Video, Cellular & Satellite

Presentation_ID

10

AP1200 Outdoor

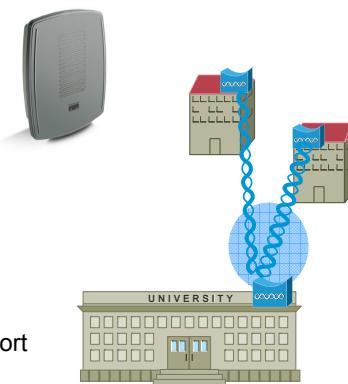

- Gründe für den Einsatz
 - Primär für wireless Client Connectivity.
 - Link Role Flexibility erlaubt Bridging und Client Access
 - Bestehende Investitionen in AP1200 Installationen
 - Autonome Anforderungen
 - Kleinere Installationen
 - Antennen und AP's überall zugelassen
 - Antenna Diversity für schwieriges RF Environment

11

BR1310

- Typischer Einsatz
 - Outdoor Einsatz
 - Einfache Installation, mehrere Montage Optionen
 - High Power Antenna bieten excellente Performance
 - Diversity Antenna erlauben Coverage auch bei schwierigen Umgebungen
 - 2.4GHz PtP und PtMP Bridging
 - 802.11b/g Access Point und WGB Support für maximale Flexibilität

12

Aironet 1500 Lightweight Mesh AP

- 2.4 GHz und 5 GHz Radios
- Viele Power Optionen
 - PoE, Strassenbeleuchtung, Mil-Spec AC Plug
- Montage auf Laternen
- NEMA, Weatherized Enclosure
 - Temperaturbereich -35C +55C
- Viele Antennen supported z.B.
 - 2.4 GHz - 5.5 dBi Omni mit N-type Connector
 - 4.9-5.8 GHz - 7.5 dBi 5GHz Omni mit N-type Connector
 - 5.8GHz - 9.5 dBi Sector mit N-type Connector

14

1st Intelligent Wireless Mesh Solution

The diagram illustrates the 1st Intelligent Wireless Mesh Solution. It features a central management interface with two windows: one showing network statistics and another showing a map of the deployment area. Below the interface is a 3D model of a building with several blue cylindrical icons representing access points. A network of lines connects these access points, forming a mesh. At the base of the building, there are several computer icons connected to the mesh. To the right of the diagram is a list of features:

- Unified Indoor+Outdoor Wi-Fi Solution
- Self-Configuring, Self-Healing Mesh
 - Zero-Touch Configuration
 - Cisco's neues Adaptive Wireless Path (AWP) Protocol
- Erstellt für Ease of Deployment und Management als Hauptpunkt
- Robust Embedded Security
- Bietet Seamless Mobility

Below the diagram are five horizontal bars with the words: **Dynamic**, **Secure**, **Reliable**, **Scalable**, and **Manageable**.

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

15

Wireless Mesh AP Deployment Options

The diagram shows four deployment options for Wireless Mesh APs:

- Point-to-Point Bridging:** Represented by two access points connected by a single line.
- Point-to-Multipoint Bridging:** Represented by a central access point connected to multiple access points, which are then connected to client devices.
- Wireless Mesh Networking:** Represented by a cluster of access points forming a mesh network, with client devices connected to the mesh.
- Outdoor Wi-Fi Extension:** Represented by a single access point connected to a client device, with a shaded area indicating its coverage range.

16

Outdoor Wireless Mesh Solution Components

The diagram illustrates the components of an outdoor wireless mesh solution. At the top left is a computer monitor displaying a heatmap of signal strength. A line connects it to a blue Cisco Wireless LAN Controller (WLC) box. From the WLC, a line extends to a blue Root-top Access Point (AP). This AP then connects via a zigzag line to a cluster of four colored APs (blue, yellow, red, purple) representing a mesh network. Below the diagram are four boxes with descriptions:

Cisco Wireless Control Systems	Cisco Wireless LAN Controller	Root-top Access Point	Pole-top Access Point
<ul style="list-style-type: none"> Wireless Mesh Management System Ermöglicht Netzwerk-wide Policy Konfiguration und Device Management unterstützt SNMP und Syslog 	<ul style="list-style-type: none"> verbindet Wireless Mesh APs mit dem wired Netzwerk RF Kalkulation und Optimierung Seamless L3 Mobility Bietet Security und Mobility Management 	<ul style="list-style-type: none"> Dient als "Root" oder "Gateway" AP zum wired Netzwerk Normalerweise auf Dächern oder Türmen Anschluss von bis zu 32 "Pole-top" APs mit 802.11a 	<ul style="list-style-type: none"> Bietet 802.11b/g Client Access Verbbindung zu Root AP mit 802.11a AC oder DC Power; PoE Ethernet Port für weitere Devices

17

Unified Indoor/Outdoor Solution

- Identische Konfiguration und Management wie bestehende Indoor WLAN Solution

Nutzt 2006, 44xx, WLCM und WISM Controller
Cisco's Wireless LAN Control System zum Management

The diagram shows a central management unit labeled "WCS Mgmt" represented by a rack server. It is connected to a network of indoor access points (represented by black rectangles) and outdoor access points (represented by blue circles with signal patterns). The outdoor APs are shown in a mesh network configuration, similar to the one in the previous slide.

18

Aironet 1500 Lightweight Mesh AP

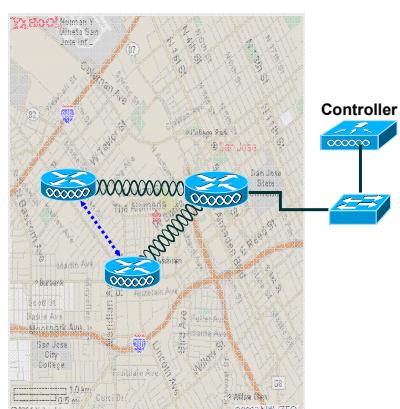

- 2.4 GHz und 5 GHz Radios
- Viele Power Optionen
PoE, Straßenbeleuchtung, Mil-Spec AC Plug
- Montage auf Laternen
- NEMA, Weatherized Enclosure
Temperaturbereich -35C +55C
- Viele Antennen supported z.B.
2.4 GHz - 5.5 dBi Omni mit N-type Connector
4.9-5.8 GHz - 7.5 dBi 5GHz Omni mit N-type Connector
5.8GHz - 9.5 dBi Sector mit N-type Connector

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

19

Einfache Installation und Konfiguration

- Mesh APs etablieren automatisch eine Connection zum Controller
 - Root über eine wired Connection
 - Pole-top über selbst-konfigurierende Backhaul Connection
- Pole-top AP nutzen Cisco's Adaptive Wireless Pathing um den besten Weg zur Root zu bestimmen
- AP authentifiziert sich am Controller und lädt Konfig und Radio Parameter

Automatic

Secure, Zero-Touch Mesh AP Configuration

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

20

Client Roaming

Dynamic **Seamless Roaming**

- Seamless L2 und L3 Roaming
 - Fast, Secure Roaming mit CCKM oder PKC
 - Roaming zwischen Controllern in einer Mobility Group
 - CCXv4 umfasst jetzt auch ein "Make before break" Roaming

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

21

Mesh Security auf allen Links

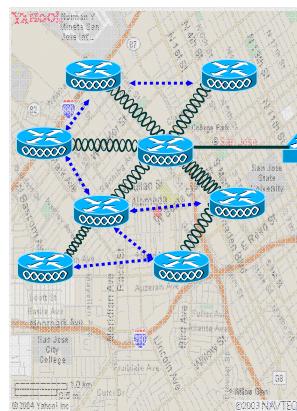

- Dynamische WLAN VLAN Assignment + 802.11i WPA/WPA2 Security
- HW-based AES encrypted Backhaul Links
- AP Authentication schützt gegen "imitation APs"
- Sicherer Control Traffic zwischen AP und Controller
- IPSec VPNs für "confidential" mesh client Traffic empfohlen

Secure **Security auf allen Layers**

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

22

Dynamische, Intelligente Path Selection

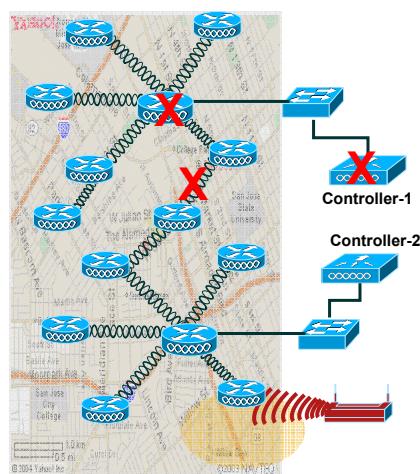

- Adaptive Wireless Path (AWP) Protokoll
25 Jahre Cisco Routing Knowledge + 20 Jahre RF Erfahrung
- AWP bietet einen optimalen Pfad zur Root
- Jeder AP hat "feasible successor(s)" wenn sich die Topologie oder der Link Status sich ändert
Note: AWP nutzt "parent sticky" Values um route flaps zu verhindern

Reliable

Self-configuring, Self-healing, Dynamische Optimierung

23

Self-Healing Mesh

- Automatisches load-balancing auf Wireless LAN Controllern
LWAPP kommuniziert Controller Load zu APs
- APs lernen secondary und tertiary Wireless LAN Controllers beim "Network Join"
- Channel re-assignment im Falle von Channel Konflikten

Reliable

Delivering Mission-Critical Wi-Fi Access

24

Einfache Erweiterung von zusätzlicher Kapazitäten und Services

VLANs

- Police
- City
- Public
- Traffic

MBSSIDs 16

RAPs Rec: 20 PAPs per RAP

Controllers 24 Cntrls per cluster

APs Rec: 3-4 Hops

- Höhere AP Dichte
- zusätzliche Root/Gateway APs
Pole-top APs werden sich auf RAPs mit besserer Path Metric connecten
- Mehr Controller
Bis zu 24 Controller können in einem N+1 Cluster arbeiten
- Architektur unterstützt auch weitere Radios wenn mehr Kapazität gebraucht wird

Scalable	Skalierbare, Service-Ready Architektur
-----------------	---

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

25

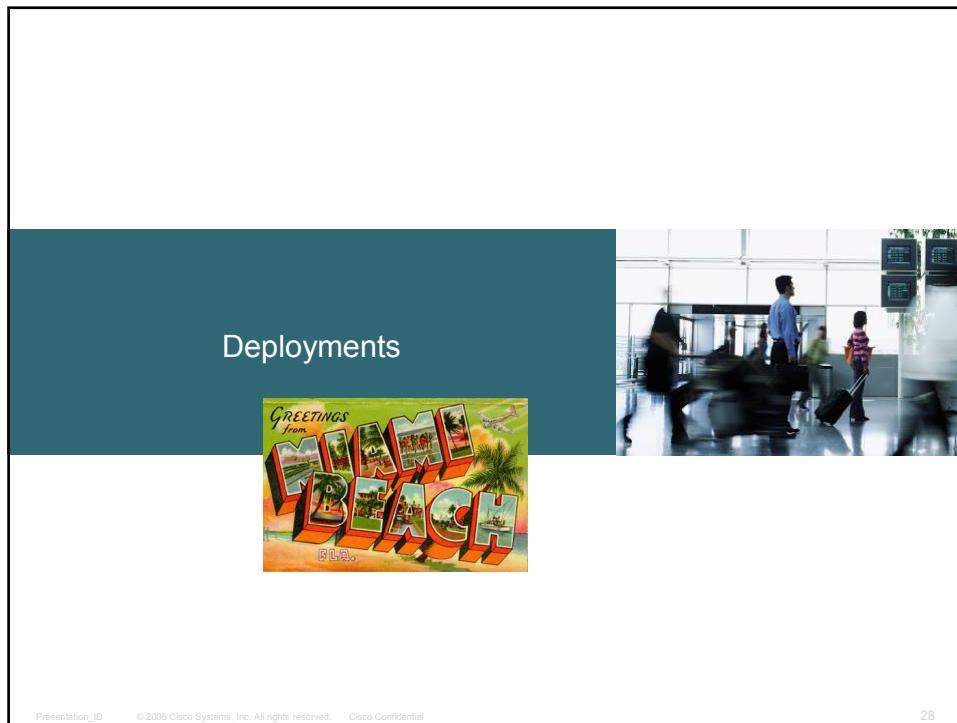

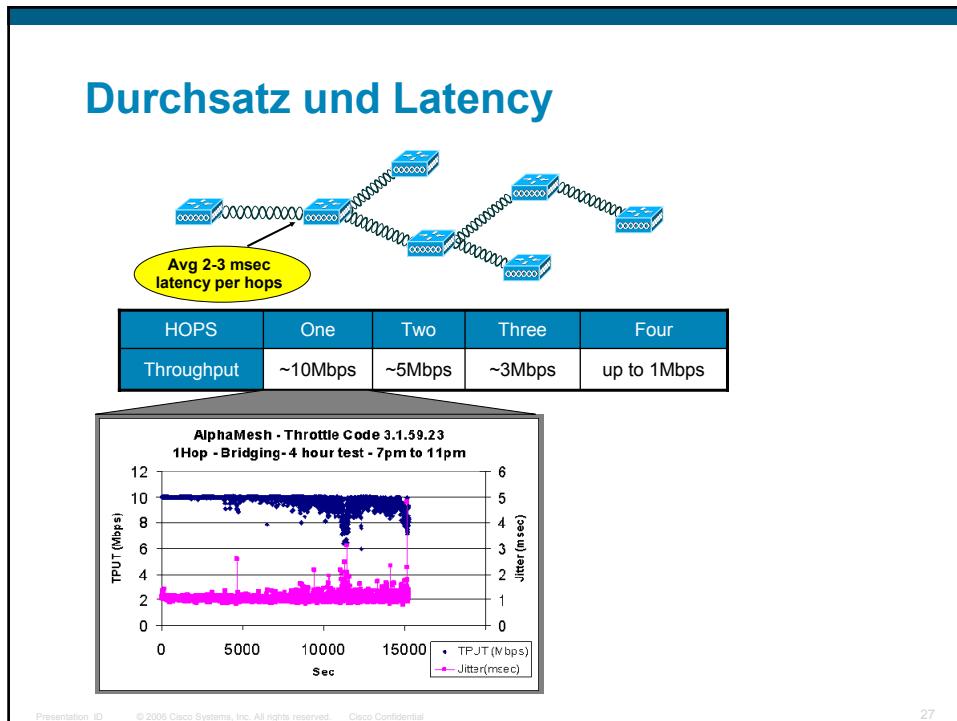

Management Solution

- Identisches Management und RM Features wie bei der Indoor Solution
- SOAP/XML Interfaces zur NMS Integration
- Detaillierte AP, Radio Information
Noise und Interference je Channel
Neighbor Lists und RSSI Details
Link Metrics, PER, Tx/Rx Detail
- Link Tests Tools
- SNR und Noise Floor Histogramme

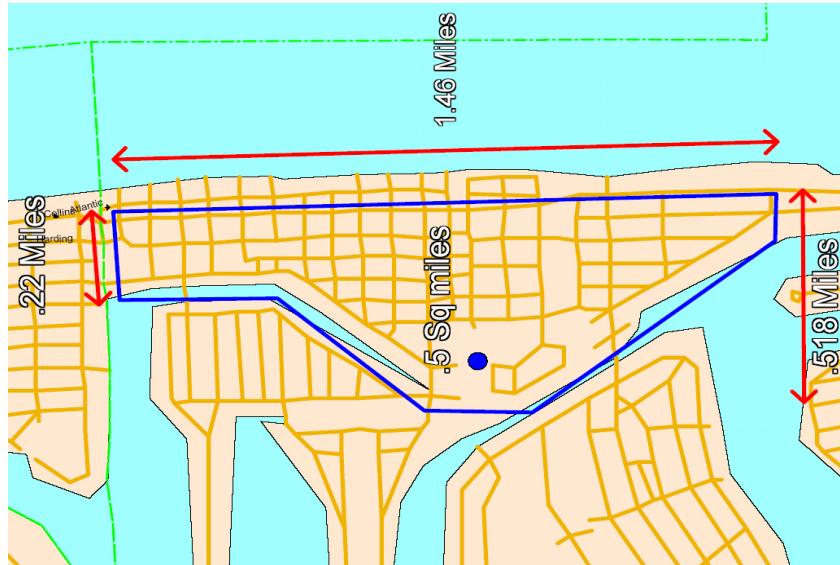

Manageable	Easy to Deploy, Easy to Manage
-------------------	---------------------------------------

Zusammenfassung

Presentation_ID © 2006 Cisco Systems, Inc. All rights reserved. Cisco Confidential

35

Wireless Mesh Networking

Zusammenfassung

- Die Zunahme von *standard-basierten Wi-Fi Clients* verändert den Zugang zum Netzwerk
- Cisco's *Best-in-Class Indoor/Outdoor Wireless Solution* bietet eine neue Alternative
- Wired+Wireless Integration ermöglicht *unified Policy Definition und Management*
- Cisco's Wireless Mesh Networking Solution ist sicher, zuverlässig, skalierbar und einfach zu installieren und zu betreiben

"Mesh Networking mit verschiedenen Applikationen wird eine low-cost Alternative für Stadtverwaltungen"

Jeff Vinin
Vice President of Gartner Research
Mesh Networking Improves First Responder's Efficiency
